

Words that speak for themselves....

We are pleased to bring to your attention the contents of the message sent recently to TDO customers by Dr. Gary Carr. Dr. Carr is a renowned US endodontist and owns TDO, a company which specializes in software for endo clinics and the manufacture of endo instruments. Dr. Carr's opinion concurs with the results of an innovative study being conducted by Prof. Joshua Moshonov and Dr. Michael Solomonov of the Faculty of Dental Medicine in Hadassa Hebrew University, the amazing results of which will be published shortly.

Hi
TDO'ers,

We have been testing the Medic.NRG Apex XFR in our office for two months. This is an apex locator from an Israeli company that has received good reviews from some independent evaluators. As most of you know, I am pretty suspicious of most marketing claims of manufacturers, so we really put it through the paces.

I am happy to report that I believe this unit is far superior to any existing units. It is remarkably accurate, even in wet canals. It is one tenth the size and about half the cost of competing units.

*I contacted the company and mentioned that it was the sort of quality product I would like eie2.com to carry. They were aware of TDO and the kind of clinicians in TDO and have let us carry their product. It will be available on the eie2.com Web site tomorrow. We plan on integrating the output from it directly into TDO in the future. **Goodbye analog technology! This unit with digital technology by MedicNRG is clearly a superior product.***
